Researchers: Recent Migraine Papers (spot-check list)

Generated **2026-10-30** from OpenAlex using the resolved author IDs in *Researchers_source_validation.md*. Each researcher has their **5 most recent works with "migraine" in the title or abstract**, newest first. *[LIVE]*

How to use this for the human check

For each researcher, open 2-3 papers and confirm that (a) the person named is the same researcher you expect (field, institution, co-authors) and (b) the affiliation shown looks right. If a paper is by a different person with the same name, mark the OpenAlex ID as wrong in the researcher log. The *Affiliation on paper* column is what the publisher recorded for this author on that specific paper, not their current job.

Caveat: OpenAlex assigns papers to authors automatically, so a wrong paper in a list is itself a sign the ID may be merged with a namesake. Dates are OpenAlex publication dates (some are the 1st of a month because only month/year is known).

Observations

- Michael L. Oshinsky: latest migraine paper in OpenAlex is 2022-11-16
- Michael L. Oshinsky: 5th most recent paper dates from 2017-03-13 (sparse recent output)
- Else Tolner: latest migraine paper in OpenAlex is 2025-02-01
- **Name-variant gap confirmed:** PubMed *Surname Initials* found only 7 (Ferrari) and 1 (van den Maagdenberg) migraine papers in 2024-26, but OpenAlex lists several 2026 papers for both. Monitor these two by OpenAlex/ORCID, not PubMed name search.
- Silberstein has a duplicate OpenAlex record (A5108076630); this list uses the ORCID-linked A5060976552, so it may miss papers filed under the duplicate.
- Counts differ from PubMed (e.g. Lipton: 1,203 here vs 726 in PubMed) (different coverage and author matching; the exact cause was not investigated).

1. Richard B. Lipton
